BASIC-ABSTRACT: The compsn. consists of the Ca salts of monobasic
acids, e.g.
gluconic-, lactic- and pantothenic acid, with the Ca salts of the
mixt. of
dibasic acids; glutaric-, succinic- and adipic acids, obtd. as
by-prod. in the
prodn. of adipic acid acid. The compsn. contains 11-20% Ca ions,
w.r.t. dry
solids. The compsn. is prepd. by dissolving the dibasic acids in
water;
discolouring the soln. with carbon, filtering, treating with
CaCO₃ and admixing
with Ca gluconate, pantothenate or lactate. After the necessary
reaction time,
the compsn. is filtered and conditioned.
